DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement filed 1/30/2006 has been fully considered. An initialed copy of said IDS is enclosed herein.

Drawings

3. The drawings filed 12/21/2005 are accepted.

Claim Rejections - 35 USC § 101

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

5. The claimed invention is directed to non-statutory subject matter. Specifically, claim 12 is directed to a "use of a polyethylene" which is not eligible subject matter.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

7. Claims 1-11 and 13-15 are rejected under 35 U.S.C. 102(a) as being anticipated by over WO03/066699A1 (herein referred to as Helland).

Helland teaches a film of a polyethylene produced by polymerization catalyzed by a single site catalyst and comprising as comonomers to ethylene at least two C4-12 alpha olefins, preferably butene and hexene (Abstract). The film is preferably a bimodal polymer comprising a low molecular weight and a high molecular weight fraction (see page 7). The low weight fraction polymer comprises a binary copolymer of ethylene and butene and the high weight fraction is a binary copolymer or terpolymer. The MWD is preferably 3-8 (first line, page 8), MFR may be 5g/10min and the density is from 905-930g/10min (page 10, lines 1-12). The composition may further comprise LDPE in amounts up to 30wt% (page 11, lines 11+). The composition may be applied to a single or multilayer substrate (page 2, lines 6+; page 6, lines 12+) and used as a heat seal film. The substrate may comprise polyamide, or the like (page 6, lines 16+). The polymer may be produced in a two-stage process comprising a loop reactor followed by a gas phase reactor.

With regards to the heat sealing force of claim 7, said limitation is herein understood to be inherent to the heat seal composition taught in Helland since it is compositionally identical to the claimed invention.
